SUMMARY

Accomplished and certified Data Engineer & Architect with 10+ years of experience designing, orchestrating, and streamlining large-scale data engineering and analytics solutions. Demonstrated track record in leveraging AI/GenAI to automate processes, accelerate insights, and drive innovation across finance, telecom, retail, and healthcare domains.

EDUCATION

Birla Institute of Technology & Science, Pilani – M.Tech in Software Systems (Data Analytics)

JNTU College of Engineering, Pulivendula – B.Tech in Computer Science

EXPERIENCE

Franklin Templeton Investments, Lead Data Engineer | Hyderabad, India

Aug 2020 – Present

- Orchestrated deployment of a Copilot Studio–powered chatbot for Compliance, earning runner-up in a global PoC showcase.
- Engineered a Streamlit application to classify and enrich third-party distribution data via Databricks Llama endpoints and Crew.ai, accelerating data quality efforts.
- Migrated Azure Databricks workloads (ADLS Gen2) to AWS with UC workflow upgrades during a major cloud consolidation—streamlined operations across teams.
- Implemented a production-grade, fine-tuned SparkNLP NER solution, standardizing entity extraction at minimal cost.
- Spearheaded Xceptor-based automation of 105+ internal processes, realizing 260 man-days in annual savings and significantly reducing error rates.

Nov 2018 – Aug 2020

- Architected and optimized end-to-end ML pipelines on GCP (Kubeflow, TFX, Composer), enabling seamless model training & serving.
- Developed ETL jobs to ingest and transform terabyte-scale data into BigQuery, Bigtable, and Cloud Storage—accelerating analytics readiness.
- Designed and deployed Angular/React UIs and Python Flask back-ends on App Engine for real-time dashboards and data APIs.
- Migrated legacy Hadoop workloads to GCP Dataproc, streamlining Spark job orchestration and reducing infrastructure costs. **Key Clients:**
 - Publishers Clearing House** – Automated ML model lifecycle (Kubeflow, KFServing) with CI/CD, yielding \$142K annual savings.
 - CBRE Inc.** – Engineered secure GCP VPCs, VPNs, Dataflow pipelines, and BigQuery schemas for enterprise data migration.
 - iHuddl Investments** – Built real-time dashboards (Angular, D3.js), WebSocket data pipelines, and scalable App Engine services.

Feb 2017 – Oct 2018

- Designed PySpark architectures and authored fuzzy-logic engines for invoice processing (EY GST solution).
- Scraped and structured multi-source news data using BeautifulSoup and Dryscrape for a regional media portal (PTI/INS).
- Developed RPA bots (Automagica, Python) and integrated testing pipelines via Jenkins for Verizon Wireless process automation.

Sept 2014 – Jan 2017

- Processed and provisioned OSS/BSS orders for TalkTalk & BT integration, enhancing order-tracking portals.
- Led data exploration, feature engineering (SciPy, Pandas), and visualization (Matplotlib) for retail analytics on the X-Retail platform.

SKILLS

Programming & Frameworks

Data & AI

MLOps

Containerization & Orchestration

Tools & Products

Domain Expertise

Leadership & Soft Skills

Python, SQL, Flask, Django, FastAPI, PySpark, Keras

GCP, Azure, AWS, Dataflow, Dataproc, Snowflake, MongoDB, DynamoDB, CosmosDB, PostgreSQL

Kubeflow, MLflow, TFX, Airflow, CI/CD (GitLab, Jenkins)

Docker, Kubernetes, Databricks, StreamSets, Microsoft Power Automate

Databricks Mosaic AI Agent Framework, Crew.ai, LangChain, Copilot Studio, Grafana, Metabase

OSS/BSS, Financial Services, Clinical, Health-Admin Data, Retail & E-Com, C&C-Telemetry Systems

Project Management, Process Automation, Cross-functional Collaboration, Innovation & Problem Solving

Projects

GenAI Agent Framework

ZPL Rendering Engine

Community Engagement

Chatbot Innovator

Built a custom Mosaic AI orchestration for data quality triage.

Developed a Python-based ZPL-to-image converter.

Regular speaker and organizer at Hyderabad Data Community hackathons.

Created a Copilot Studio–driven Compliance chatbot for FT.
